Course benefits

ARM builds on the success of previous versions and now offers significant enhancements in the areas of desktop interface management, ARM BowTie, ARM Dashboard, Viewpoint etc. Using an enterprise based case study,

you will learn how the new features of ARM can deliver considerable benefits to your management of risk. This overview course enables you to assess the potential values ARM can bring to your organization.

Related courses

ARM User Fundamentals

ARM provides a web based framework for enterprise risk management. The ability to enter, score, and manage risks using ARM is essential to minimise corporate risks. In this course, you acquire the fundamental knowledge and critical skills to record, manage and report on risks across your enterprise.

ARM Advanced Analysis

Being able to analyze ARM data effectively is an essential skill of every Risk Administrator, Manager and Professional. In this course you gain the skills to build analysis models for cost, time and use those models in Monte Carlo simulation. You learn how the principles and practices of quantitative risk analysis and how provision and contingency management will impact on spend forecasts.

ARM Administration

ARM provides a robust platform that enables organizations to run the most demanding mission-critical Risk Management Plans. It is essential that ARM Administrators know how to manage this complex platform correctly. This workshop course provides you with the skills you need to configure the ARM instance and modify system settings such as the creation of multiple PIDs and scoring schemes, design desktop grids, manage Security Roles and integrate ARM-ARM and external applications such as Primavera and MS Project.

ARM Risk Performance Manager (RPM) Training

ARM enables report designers to effectively exploit the ARM database structure with custom reports. This course provides the skills and knowledge to create, and distribute secure complex ARM reports for your organization.
